Educational Leadership and the Global Majority Rosemary M. Campbell-Stephens 2021-12-28

This book introduces a term for our times, 'Global Majority,' as conceptualised within the context of school leadership. It examines the processes and impact over time of racially-minoritising up to eighty-five percent of the world's population. The chapters illustrate how a decolonised cognitive reset from a minority to majority orientation moves practice from a place of subordination to one of agency and efficacy. By reconnecting the people of the Global Majority with their narratives and the social and historical linkages that they have always had, the book potentially contributes to a different globality; where interdependence is not driven by the economic greed of the minority, but the social and very human needs of the majority.

Blackout - Matt Ward 2001-04

Springer's Gambit W. L. Ripley 2001-06-25

Aspen-- the American Riviera-- where the rich and the beautiful go to play. Quiet streets, breathtaking mountains, and one of the lowest crime rates in America. But that's about to change. Real estate speculator Max Shapiro has been cleaning the San Francisco mob's money for three decades. Then the hammer drops-- he's dying of cancer and is on borrowed time. Resentful of the mob's hold and not wishing to die with

an IV hose in his arm, Max tells the mob he isn't paying any more tribute, hoping they'll send someone to kill him. While vacationing in Aspen, however, Max gets a call from his doctor. Good news. Max isn't dying after all. But it's too late to call off the mob's killers. Max's only hope is the enigmatic Cole Springer-- an ex-Secret Service agent with a penchant for creative thinking-- broke and in danger of losing his Aspen nightclub. Shapiro needs a bodyguard and Springer needs money, so they cut a protection deal. Enter Gerry "Knucks" Nugent, a cerebral and deadly hit man in the midst of a midlife crisis who has been sent to kill Shapiro. A mob boss dies in 'Frisco, there is a struggle for power, and an emergency cache of three million dollars ends up in the hands of Nicky Tortino, a merciless Bay Area crime lord. The shift in the underworld command sends shock waves rippling across the western United States, affecting even Shapiro and Nugent. Meanwhile, Springer's active mind runs to larger themes than merely protecting Shapiro, and he begins to formulate a scheme to save Shapiro and get his hands on the three million. Springer's scam depends upon recruiting Nugent, and Nugent is widely feared-- even by his ruthless bosses on the West Coast. Bay Area underboss Nicky Tortino travels to Aspen to get Shapiro to launder the three million, and also to have both Springer and Shapiro killed. The law closes in and Springer is running out of time and options. Beset on all sides, Springer designs an elaborate sting to extricate Shapiro and

himself from the deadly web that has formed around them. But can he trust Nugent?

Three Lectures on Complexity and Black Holes - Leonard Susskind
2020-05-11

These three lectures cover a certain aspect of complexity and black holes, namely the relation to the second law of thermodynamics. The first lecture describes the meaning of quantum complexity, the analogy between entropy and complexity, and the second law of complexity. Lecture two reviews the connection between the second law of complexity and the interior of black holes. Prof. L. Susskind discusses how firewalls are related to periods of non-increasing complexity which typically only occur after an exponentially long time. The final lecture is about the thermodynamics of complexity, and “uncomplexity” as a resource for doing computational work. The author explains the remarkable power of “one clean qubit,” in both computational terms and in space-time terms. This book is intended for graduate students and researchers who want to take the first steps towards the mysteries of black holes and their complexity.

Get Your Knee Off Our Necks - Bruce E. Johansen
2021-11-11

The death of George Floyd on May 25, 2020, and the ensuing trial of Derek Chauvin for murder a year later has rubbed raw the bloodiest stain on the United States’ history and its world reputation. The nine minutes and 29 seconds during which Chauvin’s knee crushed the spark of life out of Floyd was not unusual in the history of the United States. Before the U.S. Civil War, slaves were routinely beaten to death for disobeying orders or running away, then often lynched. In roughly two centuries, Blacks have achieved nominal freedom. But, as this book’s opening chapter and expert essays that follow indicate, freedom has been conditional based on inequity of wealth, social, and legal discrimination. None of this is new in the United States; what is new is the number of people rising up in protest, a figure in the millions around the world after Floyd’s murder. This book supplies a readable, scholarly account of recent issues in race and racism in the United States that will be useful for general readers, undergraduate students, and their professors. It will be useful in many fields, including Black studies, other

ethnic pursuits, United States history, law, criminal justice, intercultural communication, et al. The work contains a powerful historical narrative followed by several important, essays on subjects including George Floyd's murder, the rise of the Black Lives Matter movement and many other victims of systematic racism.

Collapsing Structures and Public Mismanagement Wolfgang Seibel 2021

This open access book is about mismanagement of public agencies as a threat to life and limb. Collapsing bridges and buildings kill people and often leave many more injured. Such disasters do not happen out of the blue nor are they purely technical in nature since construction and maintenance are subject to safety regulation and enforcement by governmental agencies. This book analyses four relevant cases from Australia, New Zealand, the USA and Germany. Arguing that, while preventing disaster through public oversight is essentially easy, the difficult part for public officials and private contractors and consultants alike is to resist incentives that threaten professional skills and standards. Rather than stressing well-known pathologies of bureaucracy as a potential source of disaster, this book argues, learning for the sake of prevention should aim at neutralizing threats to integrity and strengthening a sense of responsibility among public officials.

Dark Lie - Nancy Springer 2012

Sam White is forced to save his wife and the daughter she gave up for adoption from a depraved killer in this new psychological thriller from the Edgar Award-winning author of the Enola Holmes Mysteries.

Original. 35,000 first printing.

Maida Springer - Yvette Richards 2004-05-01

Maida Springer was an active participant in shaping a history that involved powerful movements for social, political and economic equality and justice for workers women, and African Americans. Maida Springer is the first full-length biography to document and analyze the central role played by Springer in international affairs, particularly in the formation of AFL-CIO's African policy during the Cold War and African independence movements. Richards explores the ways in which pan-

Africanism, racism, sexism and anti-Communism affected Springer's political development, her labor activism, and her relationship with labor leaders in the AFL-CIO, the International Confederation of Free Trade Unions (ICFTU), and in African unions. Springer's life experiences and work reveal the complex nature of black struggles for equality and justice. A strong supporter of both the AFL-CIO and the ICFTU, Springer nonetheless recognized that both organizations were fraught with racism, sexism, and ethnocentrism. She also understood that charges of Communism were often used as a way to thwart African American demands for social justice. As an African-American, she found herself in the unenviable position of promoting to Africans the ideals of American democracy from which she was excluded from fully enjoying. Richards's biography of Maida Springer uniquely connects pan-Africanism, national and international labor relations, the Cold War, and African American, labor, women's, and civil rights histories. In addition to documenting Springer's role in international labor relations, the biography provides a larger view of a whole range of political leaders and social movements. Maida Springer is a stirring biography that spans the fields of women studies, African American studies, and labor history.

The Case of the Gypsy Goodbye Nancy Springer 2011

After fourteen-year-old Enola Holmes seeks the missing Duquessa Del Campo in the seedy underbelly of nineteenth-century London, she finally reaches an understanding with her brothers Sherlock and Mycroft.

The Blackout in Britain and Germany, 1939-1945 - Marc Wiggam 2018-06-06

This book is the first major study of the blackout in the Second World War. Developing a comparative history of this system of civil defense in Britain and Germany, it begins by exploring how the blackout was planned for in both countries, and how the threat of aerial bombing framed its development. It then examines how well the blackout was adhered to, paying particular regard to the tension between its military value and the difficulties it caused civilians. The book then moves on to discuss how the blackout undermined the perception of security on the home front, especially for women. The final chapter examines the impact

of the blackout on industry and transport. Arguing that the blackout formed an integral part in mobilising and legitimating British and German wartime discourses of community, fairness and morality, the book explores its profound impact on both countries.

Enola Holmes and the Black Barouche - Nancy Springer 2021-08-31
"A young girl who is empowered, capable, and smart...the Enola Holmes book series convey an impactful message that you can do anything if you set your mind to it, and it does so in an exciting and adventurous way."--
Millie Bobby Brown Enola Holmes is back! Nancy Springer's nationally bestselling series and breakout Netflix sensation returns to beguile readers young and old in Enola Holmes and the Black Barouche. Enola Holmes is the much younger sister of her more famous brothers, Sherlock and Mycroft. But she has all the wits, skills, and sleuthing inclinations of them both. At fifteen, she's an independent young woman--after all, her name spelled backwards reads 'alone'--and living on her own in London. When a young professional woman, Miss Letitia Glover, shows up on Sherlock's doorstep, desperate to learn more about the fate of her twin sister, it is Enola who steps up. It seems her sister, the former Felicity Glover, married the Earl of Dunhynch and per a curt note from the Earl, has died. But Letitia Glover is convinced this isn't the truth, that she'd know--she'd feel--if her twin had died. The Earl's note is suspiciously vague and the death certificate is even more dubious, signed it seems by a John H. Watson, M.D. (who denies any knowledge of such). The only way forward is for Enola to go undercover--or so Enola decides at the vehement objection of her brother. And she soon finds out that this is not the first of the Earl's wives to die suddenly and vaguely--and that the secret to the fate of the missing Felicity is tied to a mysterious black barouche that arrived at the Earl's home in the middle of the night. To uncover the secrets held tightly within the Earl's hall, Enola is going to require help--from Sherlock, from the twin sister of the missing woman, and from an old friend, the young Viscount Tewkesbury, Marquess of Basilwether! Enola Holmes returns in her first adventure since the hit Netflix movie brought her back on the national bestseller lists, introducing a new generation to this beloved character and series.

The Dog Fancier - 1924

Superradiance - Richard Brito 2020-08-21

This book focuses on one mechanism in black hole physics which has proven to be universal, multifaceted and with a rich phenomenology: rotational superradiance. This is an energy extraction process, whereby black holes can deposit their rotational energy in their surroundings, leading to Penrose processes, black-hole bombs, and even Hawking radiation. Black holes are key players in star formation mechanisms and as engines to some of the most violent events in our universe. Their simplicity and compactness make them perfect laboratories, ideally suited to probe new fields or modifications to the theory of gravity. Thus, black holes can also be used to probe some of the most important open problems in physics, including the nature of dark matter or the strong CP problem in particle physics. This monograph is directed to researchers and graduate students and provides a unified view of the subject, covering the theoretical machinery, experimental efforts in the laboratory, and astrophysics searches. It is focused on recent developments and works out a number of novel examples and applications, ranging from fundamental physics to astrophysics. Non-specialists with a scientific background should also find this text a valuable resource for understanding the critical issues of contemporary research in black-hole physics. This second edition stresses the role of ergoregions in superradiance, and completes its catalogue of energy-extraction processes. It presents a unified description of instabilities of spinning black holes in the presence of massive fields. Finally, it covers the first experimental observation of superradiance, and reviews the state-of-the-art in the searches for new light fields in the universe using superradiance as a mechanism.

Cosmological and Black Hole Apparent Horizons - Valerio Faraoni 2015-07-01

This book overviews the extensive literature on apparent cosmological and black hole horizons. In theoretical gravity, dynamical situations such as gravitational collapse, black hole evaporation, and black holes

interacting with non-trivial environments, as well as the attempts to model gravitational waves occurring in highly dynamical astrophysical processes, require that the concept of event horizon be generalized. Inequivalent notions of horizon abound in the technical literature and are discussed in this manuscript. The book begins with a quick review of basic material in the first one and a half chapters, establishing a unified notation. Chapter 2 reminds the reader of the basic tools used in the analysis of horizons and reviews the various definitions of horizons appearing in the literature. Cosmological horizons are the playground in which one should take baby steps in understanding horizon physics. Chapter 3 analyzes cosmological horizons, their proposed thermodynamics, and several coordinate systems. The remaining chapters discuss analytical solutions of the field equations of General Relativity, scalar-tensor, and $f(R)$ gravity which exhibit time-varying apparent horizons and horizons which appear and/or disappear in pairs. An extensive bibliography enriches the volume. The intended audience is master and PhD level students and researchers in theoretical physics with knowledge of standard gravity.

Anticipated and Abnormal Plant Transients in Light Water Reactors - Pamela Lassahn 2013-11-11

Over the last 30 years, reactor safety technology has evolved not so much from a need to recover from accidents or incidents, but primarily from many groups in the nuclear community asking hypothetical, searching (what if) questions. This questioning has indeed paid off in establishing preventive measures for many types of events and potential accidents. Conditions, such as reactivity excursions, large break, loss of coolant, core melt, and containment integrity loss, to name a few, were all at one time topics of protracted discussions on hypothesized events. Historically, many of these have become multiyear, large-scale research programs aimed at resolving the "what ifs." For the topic of anticipated and abnormal plant transients, however, the searching questions and the research were not so prolific until the mid-1970s. At that time, probabilistic risk methodologies began to tell us we should change our emphasis in reactor safety research and development and focus more on

small pipe breaks and plant transients. Three Mile Island punctuated that message in 1979. The plant transient topic area is a multidisciplinary subject involving not only the nuclear, fluid flow, and heat transfer technologies, but also the synergistics of these with the reactor control systems, the safety systems, operator actions, maintenance and even management and the economic considerations of a given plant.

Enola Holmes and the Black Barouche: Enola Holmes Nancy Springer 2021-08-31

Enola Holmes is the much younger sister of her more famous brothers, Sherlock and Mycroft. But she has all the wits, skills, and sleuthing inclinations of them both. At fifteen, she's an independent young woman--after all, her name spelled backwards reads 'alone' - and living on her own in London. When a young professional woman, Miss Letitia Glover, shows up on Sherlock's doorstep, desperate to learn more about the fate of her twin sister, it is Enola who steps up. It seems her sister, the former Felicity Glover, married the Earl of Dunhynch and per a curt note from the Earl, has died. The Earl's note is suspiciously vague and the death certificate is even more dubious, signed it seems by a John H. Watson, M.D. (who denies any knowledge of such). The only way forward is for Enola to go undercover - or so Enola decides at the vehement objection of her brother. Space Mining and Its Regulatory Ram S. Jakhu 2016-08-12

This book addresses the complex technical challenges presented by

remote space mining in terms of robotics, remote power systems, space transport, IT and communications systems, and more. It also addresses the difficult oversight and regulatory issues that face states and non-state enterprises that would take on the perilous task of obtaining natural resources from the Moon and asteroids. An increasing number of countries are becoming involved in space-related activities that were previously carried out primarily by the United States and the USSR (now the Russian Federation). How these regulatory endeavors might be handled in international treaties, standards, codes of conduct or other means have become a truly international political issue. And there is yet another issue. In the past, space activities traditionally fell under the exclusive domain of government. But the last few years have seen the emergence of the private sector of "space entrepreneurs." This poses many challenges for the pre-existing governance regimes and state-based conceptions of international law. This book examines the adequacies and ambiguities in treaty provisions and national laws and in currently accepted practices involving the growing exploration and exploitation of space-based natural resources.

Sky Rider - Nancy Springer 2014-12-30
Everything changes when a handsome stranger rides off into the night on Dusty's horse There's no way around it: Dusty's horse Tazz needs to be

put down. Once a champion jumper, Tazz can barely walk now due to hoof pain. And that's not the only thing that's wrong in Dusty's life. Since her mother's death, Dusty's dad hasn't stopped drinking—even after his drunk driving put Dusty in the hospital with a now-chronic back injury. Why don't they just put me down too? she wonders. While Dusty is giving Tazz one last grooming, his ears suddenly prick up as a stranger approaches: a young boy with an otherworldly beauty. He offers to take Tazz with him, and the two race off into the distance as though Tazz were in perfect health, with the boy perched on his back. Who could this person be? And what is he doing here? It's only when Dusty returns to school the next day that she hears about the boy who was killed. When she sees his photo in the newspaper, she knows that he's the mysterious guy who rode off on Tazz. What she doesn't know is that he will soon return.

The Black Middle Ages Matthew X. Vernon 2018-06-13

The Black Middle Ages examines the influence of medieval studies on African-American thought. Matthew X. Vernon focuses on nineteenth century uses of medieval texts to structure racial identity, but also considers the flexibility of medieval narratives more broadly in the medieval period, twentieth and twenty-first centuries. This book engages disparate discourses to reassess African-American positionalities in time and space. Utilizing a transhistorical framework, Vernon reflects on medieval studies as a discipline built upon a contended set of ideologies and acts of imaginative appropriation visible within source texts and their later mobilizations.

Stratospheric Flight Andras Sóbester 2011-06-28

In this book, Dr. Andras Sobester reviews the science behind high altitude flight. He takes the reader on a journey that begins with the complex physiological questions involved in taking humans into the "death zone." How does the body react to falling ambient pressure? Why is hypoxia (oxygen deficiency associated with low air pressure) so dangerous and why is it so difficult to 'design out' of aircraft, why does it still cause fatalities in the 21st century? What cabin pressures are air passengers and military pilots exposed to and why is the choice of an

appropriate range of values such a difficult problem? How do high altitude life support systems work and what happens if they fail? What happens if cabin pressure is lost suddenly or, even worse, slowly and unnoticed? The second part of the book tackles the aeronautical problems of flying in the upper atmosphere. What loads does stratospheric flight place on pressurized cabins at high altitude and why are these difficult to predict? What determines the maximum altitude an aircraft can climb to? What is the 'coffin corner' and how can it be avoided? The history of aviation has seen a handful of airplanes reach altitudes in excess of 70,000 feet - what are the extreme engineering challenges of climbing into the upper stratosphere? Flying high makes very high speeds possible -- what are the practical limits? The key advantage of stratospheric flight is that the aircraft will be 'above the weather' - but is this always the case? Part three of the book investigates the extreme atmospheric conditions that may be encountered in the upper atmosphere. How high can a storm cell reach and what is it like to fly into one? How frequent is high altitude 'clear air' turbulence, what causes it and what are its effects on aircraft? The stratosphere can be extremely cold - how cold does it have to be before flight becomes unsafe? What happens when an aircraft encounters volcanic ash at high altitude? Very high winds can be encountered at the lower boundary of the stratosphere - what effect do they have on aviation? Finally, part four looks at the extreme limits of stratospheric flight. How high will a winged aircraft will ever be able to fly? What are the ultimate altitude limits of ballooning? What is the greatest altitude that you could still bail out from? And finally, what are the challenges of exploring the stratospheres of other planets and moons? The author discusses these and many other questions, the known knowns, the known unknowns and the potential unknown unknowns of stratospheric flight through a series of notable moments of the recent history of mankind's forays into the upper atmospheres, each of these incidents, accidents or great triumphs illustrating a key aspect of what makes stratospheric flight aviation at the limit.

Springer Handbook of Spacetime - Abhay Ashtekar 2014-09-01
The Springer Handbook of Spacetime is dedicated to the ground-

breaking paradigm shifts embodied in the two relativity theories, and describes in detail the profound reshaping of physical sciences they ushered in. It includes in a single volume chapters on foundations, on the underlying mathematics, on physical and astrophysical implications, experimental evidence and cosmological predictions, as well as chapters on efforts to unify general relativity and quantum physics. The Handbook can be used as a desk reference by researchers in a wide variety of fields, not only by specialists in relativity but also by researchers in related areas that either grew out of, or are deeply influenced by, the two relativity theories: cosmology, astronomy and astrophysics, high energy physics, quantum field theory, mathematics, and philosophy of science. It should also serve as a valuable resource for graduate students and young researchers entering these areas, and for instructors who teach courses on these subjects. The Handbook is divided into six parts. Part A: Introduction to Spacetime Structure. Part B: Foundational Issues. Part C: Spacetime Structure and Mathematics. Part D: Confronting Relativity theories with observations. Part E: General relativity and the universe. Part F: Spacetime beyond Einstein.

Mars One - Erik Seedhouse 2016-10-21

This book dissects the hype and hubris of the Mars One venture. Every aspect of the mission design is scrutinized, from the haphazard selection

process to the unproven mission architecture. A controversial project, many professional astronauts consider Mars One a reckless attempt, yet it gained popular attention. This go-to reference guide provides the reader with insights into the myriad issues arising from the project's loss of funding, loss of sponsorship, loss of TV rights. It explains what contributed to an overly optimistic assessment of Mars One's mission-specific technology, and what captivated the public and the many willing candidates despite these flaws. From the author of *Survival and Sacrifice in Mars Exploration* (2015) among many more books on spacefaring, this is yet another up-to-the-minute account of an emerging player in the private space market from an expert on the subject.

Living for the Revolution - Kimberly Springer 2005-04-07

The first in-depth analysis of the black feminist movement, *Living for the Revolution* fills in a crucial but overlooked chapter in African American, women's, and social movement history. Through original oral history interviews with key activists and analysis of previously unexamined organizational records, Kimberly Springer traces the emergence, life, and decline of several black feminist organizations: the Third World Women's Alliance, Black Women Organized for Action, the National Black Feminist Organization, the National Alliance of Black Feminists, and the Combahee River Collective. The first of these to form was founded in 1968; all five were defunct by 1980. Springer demonstrates that these organizations led the way in articulating an activist vision formed by the intersections of race, gender, class, and sexuality. The organizations that Springer examines were the first to explicitly use feminist theory to further the work of previous black women's organizations. As she describes, they emerged in response to marginalization in the civil rights and women's movements, stereotyping in popular culture, and misrepresentation in public policy. Springer compares the organizations' ideologies, goals, activities, memberships, leadership styles, finances, and communication strategies. Reflecting on the conflicts, lack of resources, and burnout that led to the demise of these groups, she considers the future of black feminist organizing, particularly at the national level. *Living for the Revolution* is an essential reference: it provides the history of a movement that influenced black feminist theory and civil rights activism for decades to come.

Power Grid Complexity - Shengwei Mei 2011-09-15

"Power Grid Complexity" introduces the complex system theory known as self-organized criticality (SOC) theory and complex network theory,

and their applications to power systems. It studies the network characteristics of power systems, such as their small-world properties, structural vulnerability, decomposition and coordination strategies, and simplification and equivalence methods. The book also establishes four blackout models based on SOC theory through which the SOC of power systems is studied at both the macroscopic and microscopic levels. Additionally, applications of complex system theory in power system planning and emergency management platforms are also discussed in depth. This book can serve as a useful reference for engineers and researchers working with power systems. Shengwei Mei is a Professor at the Department of Electrical Engineering at Tsinghua University, China. Xuemin Zhang is a Lecturer at the Department of Electrical Engineering at Tsinghua University, China. Ming Cao is an Assistant Professor at the Faculty of Mathematics and Natural Sciences at the University of Groningen, the Netherlands.

Konrad F. Springer - Dieter Czeschlik 2013-03-07

Dieses Buch ist Konrad F. Springer zu seinem 60. Geburtstag gewidmet. Kollegen aus der Wissenschaft und dem Verlagswesen weltweit schildern in ihren Beiträgen ihre Zusammenarbeit mit Konrad F. Springer nicht nur als einem der führenden Wissenschaftsverleger, sondern auch als Promoter neuer Zweige innerhalb der Naturwissenschaften. Diese half er zu entwickeln, in dem er neue Kommunikationswege für Wissenschaftler schuf, die bis dahin geographisch und von ihrer Arbeitsrichtung her unabhängig voneinander an verwandten Fragestellungen arbeiteten.

The Black Beast Nancy Springer 2021-10-12

In Nancy Springer's enthralling fourth volume of the Book of Isle, two young princes set out to destroy their own father and the pervasive evil that poisons the kingdom. An epic saga set in an ageless island stronghold of magic and mystery, Nancy Springer's Book of Isle series is considered by many to be among the most accomplished offerings in all of fantasy literature, as lyrical and inventive as the classic works of J. R. R. Tolkien. In this unforgettable novel, a violent rift in a royal house

threatens to tear an entire kingdom asunder. The next in line to rule the troubled realm of Melior, Prince Tirell gave his heart to the gentle and beautiful peasant girl Mylitta. But she died at the cruel whim of Tirell's father, the king, who insists on a more politically expedient match for his rebellious son. Since the murder of his love, Tirell's heart has hardened, and now, with the aid of his younger brother, Frain, the healer, he seeks an army that will help him defeat the evil, unrepentant monarch. All hope for victory in the war to come awaits the brothers somewhere deep in the mysteries of the Vale, where a beautiful goddess also dwells. But a sinister presence is spreading its malevolence throughout the land--and Melior can never again be truly whole until the kingdom is rid of the terrible scourge of the Black Beast.

Black Hole Astrophysics David L. Meier 2012-07-27

As a result of significant research over the past 20 years, black holes are now linked to some of the most spectacular and exciting phenomena in the Universe, ranging in size from those that have the same mass as stars to the super-massive objects that lie at the heart of most galaxies, including our own Milky Way. This book first introduces the properties of simple isolated holes, then adds in complications like rotation, accretion, radiation, and magnetic fields, finally arriving at a basic understanding of how these immense engines work. Black Hole Astrophysics • reviews our current knowledge of cosmic black holes and how they generate the most powerful observed phenomena in the Universe; • highlights the latest, most up-to-date theories and discoveries in this very active area of astrophysical research; • demonstrates why we believe that black holes are responsible for important phenomena such as quasars, microquasars and gamma-ray bursts; • explains to the reader the nature of the violent and spectacular outflows (winds and jets) generated by black hole accretion.

Dismantling Race in Higher Education Jason Arday 2018-08-31

This book reveals the roots of structural racism that limit social mobility and equality within Britain for Black and ethnicised students and academics in its inherently white Higher Education institutions. It brings together both established and emerging scholars in the fields of Race

and Education to explore what institutional racism in British Higher Education looks like in colour-blind 'post-race' times, when racism is deemed to be 'off the political agenda'. Keeping pace with our rapidly changing global universities, this edited collection asks difficult and challenging questions, including why black academics leave the system; why the curriculum is still white; how elite universities reproduce race privilege; and how Black, Muslim and Gypsy traveller students are disadvantaged and excluded. The book also discusses why British racial equality legislation has failed to address racism, and explores what the Black student movement is doing about this. As the authors powerfully argue, it is only by dismantling the invisible architecture of post-colonial white privilege that the 21st century struggle for a truly decolonised academy can begin. This collection will be essential reading for students and academics working in the fields of Education, Sociology, and Race.

Pulling G - Erik Seedhouse 2012-09-26

Performing in a high G environment is extremely demanding on the body: pulling G forces blood to the body's extremities, putting the pilot, astronaut or driver at risk of G-Induced Lack of Consciousness (G-LOC). In "Pulling G" Erik Seedhouse describes what it feels like to pull 7 G in a

fighter plane and the G pressures on the body when driving a Formula 1 car and many other gravity-defying vehicles. The book relates, for the first time, the effects of G in both hyper-gravity and microgravity. It describes the human response to increased and decreased G and the potentially dangerous effects of high G, with particular reference to dynamic injuries sustained in high acceleration environments. "Pulling G" provides an overview of G-related research and the development of intervention methods to mitigate the effects of increased and reduced G. As well as relating the training required to overcome G-forces on the Formula 1 track, Erik Seedhouse looks at the G forces encountered in such G environments as ejection from an aircraft, launch/re-entry, and zero-G. The book also considers how artificial gravity can be used to prevent bone demineralization and to reduce the effects of de-conditioning in astronauts. Erik Seedhouse is eminently qualified to describe the effects of large accelerations on the body. In addition to being the author of several previously published Springer Praxis books, he has developed astronaut-training protocols and is the training director for Astronauts for Hire (A4H). He is also the Canadian Forces' High Risk Acceleration Training Officer.
