Air Crash Investigations - Igor Korovin 2009-10

On 14 September 2008 Aeroflot Flight 821, a Boeing 737-505, operated by Aeroflot-Nord, a subsidiary of the Russian airline Aeroflot, crashed on approach to Bolshoye Savino Airport, Perm, Russia. All 82 passengers and 6 crew members were killed. The aircraft was completely destroyed. According to the final investigation report, the main reason of the crash was pilot error. Both pilots had lost spatial orientation due to new instruments they were not familiar with, lack of proper training, insufficient knowledge of English and fatigue from lack of adequate rest. Alcohol in the Captain's blood may also have contributed to the accident.

LEARN TO FLY AND BECOME A PILOT! - Vesa Turpeinen 2019-04-09

Don't think you can become a pilot? I think you can - learning to fly is easier than you think! Have you always dreamed of becoming a pilot? Are you wondering if now is a good time to become a pilot? Do you want to get started with flight training, but need help choosing a school? All your questions will be answered in this book! This book may be the most important book you will ever read if you want to become a professional pilot... But first a warning, this is not a book about "learning to fly" in a literal sense. You won't learn how aerodynamics work or how to control an aircraft in flight - that's something you will learn once you start your flight training. Instead, this book contains information that flight schools won't teach you. The information you NEED to know before you should commit to flight training! The knowledge you gain from this book is essential for you to have a successful and enjoyable career as a commercial or airline pilot! The main focus of the book is on FAA and EASA flight training in the U.S., but most of the principles apply regardless of your nationality. Whether you want to earn your private pilot certificate, become a corporate pilot, or become a captain in a major airline - this book is for you. And one note to the ladies - it is now the golden age for female pilots! Did you know you could become a commercial pilot, or even a flight instructor, at the age of 18 with less than 12 months of training? Right now is an excellent time to become a pilot because there is a global pilot shortage that is expected to last for the next two decades or longer. Boeing estimates that there will be a worldwide demand for 790,000 pilots between 2018 and 2037. That's a lot of pilots! How do I know the pilot shortage is not just a myth? Currently, most airlines in China are hiring airline captains from foreign countries because there are not enough Chinese pilots. And what's the pay like? Boeing 737 or Airbus 320 captains can earn an annual salary up to \$380,000! That's over 30k per month! ...and, wait for it--it's all tax-free (in China)! Yes, it will be a long road to become an airline captain earning a good salary. But guess what? Reading this book will help you decide if you want to pursue the career. Who is this Author? With Bachelor's and Master's degrees from Embry-Riddle Aeronautical University, Vesa knows a thing or two about aviation. With several years as a flight instructor, assistant chief flight instructor, and ultimately as the Chief Flight Instructor of a major flight academy, he is an expert in pilot training. Having trained hundreds of pilots who currently work for many airlines (including many Chinese airlines), he has the first-hand knowledge of the demand for new pilots. Because of his experience as a corporate airline captain, he understands the benefits and downsides of pilot life and can

help you decide whether it's a good career path for you! Here are some of the questions this book will answer: Is a pilot career a good choice for me? How much does flight training cost? What are the medical requirements for pilots? How can I finance flight training without any savings or income? What are the benefits and downsides of a pilot career? What kind of certificates and ratings do I need to start working as a professional pilot? How to choose the best flight school (and flight instructor) based on my individual needs? Flight training is fast-paced, fun, and exciting. Why not get started now?

Or if your are a technician from Canada or Europe this book will help you with the Advanced Avionics segment for certification. This book will help anyone who wants to learn more about how all of the navigation and indicating flight systems "talk" to each other or just to look into the complication world of a modern aircraft cockpit. This book covers how a cathode ray tube works and the new light emitting diode and liquid crystal display systems. In this book, you will also learn about the new heads-up guidance systems that are now becoming standard in large aircraft. This book begins with the progression of glass displays into cockpits to how these complicated systems communicate with the crew and the aircraft flight management systems. Starting with the cathode ray tube, to liquid crystal to light emitting diodes this book teaches how these displays operate and how they might fail. This book will provide an aircraft general familiarization courses on the glass instrument indicating systems for a variety of aircraft. For general aviation aircraft this book covers the Garmin g 1000 system for air carrier aircraft there are sections for the Boeing 757 and 737 or the Bombardier CRJ and Challenger indication systems. With just under 300 pages of full color 8 1/2 by 11 this book is full of drawings and diagrams to help visualize, in simple terms, the complex systems that are becoming standard for aircraft manufactured today.

Flying Blind Peter Robison 2022-10-11

NEW YORK TIMES BUSINESS BEST SELLER • A suspenseful behind-the-scenes look at the dysfunction that contributed to one of the worst tragedies in modern aviation: the 2018 and 2019 crashes of the Boeing 737 MAX. An "authoritative, gripping and finely detailed narrative that charts the decline of one of the great American companies" (New York Times Book Review), from the award-winning reporter for Bloomberg. Boeing is a century-old titan of industry. It played a major role in the early days of commercial flight, World War II bombing missions, and moon landings. The planemaker remains a cornerstone of the U.S. economy, as well as a linchpin in the awesome routine of modern air travel. But in 2018 and 2019, two crashes of the Boeing 737 MAX 8 killed 346 people. The crashes exposed a shocking pattern of malfeasance, leading to the biggest crisis in the company's history—and one of the costliest corporate scandals ever. How did things go so horribly wrong at Boeing? *Flying Blind* is the definitive exposé of the disasters that transfixed the world. Drawing from exclusive interviews with current and former employees of Boeing and the FAA; industry executives and analysts; and family members of the victims, it reveals how a broken corporate culture paved the way for catastrophe. It shows how in the race to beat the competition and reward top executives, Boeing skimmed on testing, pressured employees to meet unrealistic deadlines, and convinced regulators to put planes into service without properly equipping them or their pilots for flight. It examines how the company, once a treasured American innovator, became obsessed with the bottom line, putting shareholders over customers, employees, and communities. By Bloomberg investigative journalist Peter Robison, who covered Boeing as a beat reporter during the company's fateful merger with McDonnell Douglas in the late '90s, this is the story of a business gone wildly off course. At once riveting and disturbing, it shows how an iconic company fell prey to a win-at-all-costs mentality, threatening an industry and endangering countless lives.

Prospective Memory - Matthias Kliegel 2012-09-10

Over the last decade, the topic of prospective memory – the encoding, storage and delayed retrieval of intended actions – has attracted much interest, and this is reflected in a rapidly growing body of literature: 350 scientific articles have been published on this topic since the appearance of the first edited book in 1996. In addition to the quantity, the quality and diversity of approaches to research in the field has also developed rapidly. *Prospective Memory* provides an accessible, integrated guide to the expanded literature on the topic. While many of the authors also contributed to the 1996 book and can be regarded as the founders of current prospective memory research, other contributions come from authors who are relatively new to the field and who are examining broader aspects of prospective memory and, as a result, extending our understanding of it. Besides more generally reviewing the expanded literature, all authors have been encouraged to consider future directions for research and to raise questions that they believe all researchers in this area will need to address. The book is divided into four sections that together provide a broad and deep introduction to the cognitive, neuroscience, developmental, and applied aspects of prospective memory. Following the model of the first prospective memory volume, prominent memory researchers evaluate the papers in each section and comment more generally on the state of prospective memory research in the four major areas targeted.

Human Factors Models for Aviation Accident Analysis and Prevention Thomas G.C. Griffin 2017-03-02

The investigation and modelling of aviation accident causation is dominated by linear models. Aviation is, however, a complex system and as such suffers from being artificially manipulated into non-complex models and methods. This book addresses this issue by developing a new approach to investigating aviation accident causation through information networks. These networks centralise communication and the flow of information as key indicators of a system's health and risk. This holistic approach focuses on the system environment, the activity that takes place within it, the strategies used to conduct this activity, the way in which the constituent parts of the system (both human and non-human) interact and the behaviour required. Each stage of this book identifies and expands upon the potential of the information network approach, maintaining firm focus on the overall health of a system. The book's new model offers many potential developments and some key areas are studied in this research. Through the centralisation of barriers and information nodes the method can be applied to almost any situation. The application of Bayesian mathematics to historical data populations provides scope for studying error migration and barrier manipulation. The book also provides application of these predictions to a flight simulator study for the purposes of validation. Beyond this it also discusses the applicability of the approach to industry. Through working with a legacy airline the methods discussed are used as the basis for a new and prospective safety management system.

The Power of Ethics - Susan Liautaud 2021-01-05

The essential guide for ethical decision-making in the 21st century, The Power of Ethics depicts "ethical decision-making not in a nebulous philosophical space, but at the point where the rubber meets the road" (Michael Schur, producer and creator of The Good Place). It's not your imagination: we're living in a time of moral decline. Publicly, we're bombarded with reports of government leaders acting against the welfare of their constituents; companies prioritizing profits over health, safety, and our best interests; and technology posing risks to society with few or no repercussions for those responsible. Personally, we may be conflicted about how much privacy to afford our children on the internet; how to make informed choices about our purchases and the companies we buy from; or how to handle misconduct we witness at home and at work. How do we find a way forward? Today's ethical challenges are increasingly gray, often without a clear right or wrong solution, causing us to teeter on the edge of effective decision-making. With concentrated power structures, rapid advances in technology, and insufficient regulation to protect citizens and consumers, ethics are harder to understand than ever. But in The Power of Ethics, Susan Liautaud shows how ethics can be used to create a sea change of positive decisions that can ripple outward to our families, communities, workplaces, and the wider world—offering unprecedented opportunity for good. Drawing on two decades as an ethics advisor guiding corporations and leaders, academic institutions, nonprofit organizations, and students in her Stanford University ethics courses, Susan Liautaud provides clarity to blurry ethical questions, walking you through a straightforward, four-step process for ethical decision-making you can use every day. Liautaud also explains the six forces driving virtually every ethical choice we face. Exploring some of today's most challenging ethics dilemmas and showing you how to develop a clear point of view, speak out with authority, make effective decisions, and contribute to a more ethical world for yourself and others, The Power of Ethics is the must-have ethics guide for the 21st century.

If you have acquired this book it means you are interested in being the best pilot, you can possibly be. Being the best pilot, requires a continuously never-ending dedication to learning and revising, from the time you first step into the classroom till the day you retire from aviation. "As we aspire to become better and safer, we must never forget the knowledge and skills we have already acquired" - Carsten Borgen You will be familiar with most of the information in this book, but over time that information will slowly fade away. As a professional pilot it is crucial to keep this knowledge sharp but going through all the ATPL subject publications again and again, would be an endless task. This book is written as a quick reference guide to pilots and aviation enthusiasts, in an effort to simplify the process of staying current and revising the theory you have already learned while adding to that knowledge. Using this book you can within a couple of hours revise a complete subject matter. Whether you have acquired this book to remain current or simply to prepare for exams or interviews, this book will stay with you for the rest of your career.

[AIR CRASH INVESTIGATIONS - THE BOEING 737 MAX DISASTER PART II - The Crash of Ethiopian Airlines Flight 302](#) Mark Barreveld 2021-11-11

On March 10, 2019, at 05:38 UTC, Ethiopian Airlines flight 302, Boeing 737-8 (MAX), ET-AVJ, took off as a scheduled international flight, from Addis Ababa Bole International Airport bound to Nairobi, Kenya. It departed Addis Ababa with 157 persons on board: 2 flight crew (a Captain and a First Officer), 5 cabin crew and one IFSO, 149 regular passengers. The take-off roll and lift-off was normal, including normal values of left and right angle-of-attack (AOA). Shortly after liftoff, the left Angle of Attack sensor recorded value became erroneous and the left stick shaker activated and remained active until near the end of the recording. In addition, the airspeed and altitude values from the left air data system began deviating from the corresponding right side values. The left and right recorded AOA values began deviating. At 5:40:22, the second automatic nose-down trim activated. Following nose-down trim activation GPWS DON'T SINK sounded for 3 seconds and "PULL UP" also displayed on PFD for 3 seconds. The Captain was unable to maintain the flight path and requested to return back to the departure airport. At 05:43:21, an automatic nose-down trim activated for about 5 s. The stabilizer moved from 2.3 to 1 unit. The rate of climb decreased followed by a descent in 3 s after the automatic trim activation. The descent rate and the airspeed continued increasing. Computed airspeed values reached 500kt, pitch and descent rate values were greater than 33,000 ft/min. Finally; both recorders stopped recording at around 05:44 the Aircraft impacted terrain 28 NM South East of Addis Ababa near Ejere. All 157 persons on board: 2 flight crew, 5 cabin crew and one IFSO, and 149 regular passengers were fatally injured. The crash of Ethiopian Airlines Flight 302 was, after the crash of Lion Air Flight 610 on October 29, 2018, the second crash of a Boeing 737 MAX 8 within a period of 4 months.
