The Chemistry of Everything - Kimberley Waldron 2007

The Chemistry of Everything addresses the "need-to-know" basics of chemistry required to grasp everyday science issues. Through innovative themes and creative applications, it provides an engaging introduction to chemistry for nonscience majors. Mixes basic chemical principles from physical, inorganic, organic, analytical, and biological specializations to support thematic coverage of topics such as diamonds, groceries, and drugs. Extends readers' vocabulary and knowledge of the scientific issues encountered in daily life. Addresses issues of ethics and responsible use in contemporary science. Captures the current fascination with forensics through "Chemistry at the Crime Scene" boxed sections. For those interested in basic chemistry.

Chemistry: An Atoms First Approach Steven S. Zumdahl 2011-01-01

Steve and Susan Zumdahl's texts focus on helping students build critical thinking skills through the process of becoming independent problem-solvers. They help students learn to think like a chemists so they can

apply the problem solving process to all aspects of their lives. In CHEMISTRY: AN ATOMS FIRST APPROACH, the Zumdahls use a meaningful approach that begins with the atom and proceeds through the concept of molecules, structure, and bonding, to more complex materials and their properties. Because this approach differs from what most students have experienced in high school courses, it encourages them to focus on conceptual learning early in the course, rather than relying on memorization and a plug and chug method of problem solving that even the best students can fall back on when confronted with familiar material. The atoms first organization provides an opportunity for students to use the tools of critical thinkers: to ask questions, to apply rules and models and to evaluate outcomes.
