Cruel World - Albert Ball 2017-09-13

What kind of world have we created? Increasing numbers of us live in fear of losing our homes and jobs, many forced to rely on the charity of food banks to feed ourselves and our children. Many of us live on the

streets in utter destitution, often with mental health problems, and no one seems to care. Many more of us live in poor countries where for want of clean water and basic sanitation we must watch helplessly as our children and infants die in their millions every year. At the other end of the scale some of us have wealth that can't be consumed in a thousand lifetimes. Then there are the environmental dangers that we all face - scarcity of fresh water; widespread pollution of the air, sea and rivers; deforestation; loss of biodiversity; and above all climate change - and our governments, severely handicapped by those of us with vested interests, unable to take the decisive action that is necessary to combat them. Why is it that the world's abundant wealth is spread so lavishly for the very few and so thinly for the very many? Why is it that we understand so well the dire consequences awaiting us from environmental catastrophe yet seem unable to do more than a fraction of what is required? This book presents the results of an exploration into these concerns by someone who feels deeply disturbed by them; who feels that people in great numbers are being squeezed beyond breaking point; who feels that we are racing headlong towards a cliff edge with people who claim to be in control but whose hands are tied. The exploration bore fruit. It revealed that the major systems that underpin the modern world maintain themselves by widespread exploitation of the disadvantaged, made possible by equally widespread ignorance of how it happens. It doesn't have to be that way. We can turn a world on a collision course with nature into a world sustainable for the very long term. We can turn a cruel world into a kind world, but to do so requires a broad public understanding of what is really going on. The purpose of this book is to help provide that understanding.

Macroeconomic Causes of Unemployment: Diagnosis and Policy Recommendations / - Wolfgang Filc 2015-03-03

This conference volume deals with one of the most severe economic, social and political problems major European economies face since the early nineties, the problem of lasting high unemployment. Contrary to the current German discussion, solely concentrating on microeconomic explanations and therapy recommendations, this volume presents papers based on various macro-economic points of view, showing different ways out of the employment crisis. Apart from renowned German economists, some well-known international academics participated in the 1998 Berlin symposium, to learn from experience in other countries. The first chapter contains the main standard textbook models and paradigms explaining lasting high unemployment. The question in the second chapter is if it is possible to fight unemployment with the help of macro policy on a purely national basis in the presence of global markets. The third chapter indicates possible effects of misalignments in financial markets on economic growth and employment. The contributions of the fourth chapter present experiences of other countries, which have succeeded in recent years in lowering their unemployment rates. The question at issue is, if these concepts can be transferred to Germany. The topics of the concluding chapter are practical macroeconomic starting points for sustainable employment growth in Europe. The methods contradict supply side arguments for the stabilisation of employment predominant in the German discussion. Attention is focused on relations between the role of monetary and fiscal policy in close conjunction with wage policy. Furthermore it is made evident that in global markets a theoretical macroeconomic concept as a base for sustainable employment is not very promising without enhanced international co-operation.
