**Gurus of Chaos** - Saurabh  
Mukherjea 2015-03-30  
What does it take to be a stock market guru? What are the traits needed to be a successful investor? Can one master the

stock market or is it a gift one is born with? How does one build a portfolio and protect it? Learn from the masters. The Indian stock market is many things to many people. Some are drawn to its thrill and promise but, more often than not, they fail to recognize the

risk that accompanies the reward of a great ride. For many, the market and its workings defy logic and mastery. However, within the universe of market watchers in India, there is a small group that has managed to build a fine set of navigation tools and develop a unique perspective and approach towards the market. They have created and institutionalized investment strategies based on their experiences and philosophies. Saurabh Mukherjea delves into the minds of seven such individuals asking them to elaborate on the tools they use and how these work. He traces their journey from being novices to successful long-term investors. Using their insights and his own experience of working in the market for nearly a decade, Mukherjea provides an essential and indispensable framework for operating in the Indian stock market. The interviews with prominent fund managers in the book are: · Sanjoy Bhattacharya · Alroy Lobo · Akash Prakash · Sankaran

## **The FFT in the 21st Century**

- James K. Beard 2013-03-09

This book was undertaken to provide a text and reference on the theory and practice of the FFT and its common usage.

This book is organized in only four chapters, and is intended as a tutorial on the use of the Fff and its trade space. The trade space of the FFT is the parameters in its usage and the relationships between them - the sample rate, the total number of points or the interval over which processing occurs in a single Fff, the selectivity of tuning to a given frequency over signals out-of-band, and the bandwidth over which a signal appears. The examples given in this text are in FORTRAN 9512003.

FORTRAN 2003 was frozen as a standard while this work was in progress. The listings given here are intended as an aid in understanding the FFT and associated algorithms such as spectral window weightings, with the goal of making the best of them more accessible to the reader. The code I use here provides a simple bridge

between the material in the text and implementation in FORTRAN 2003, C++, Java, MATLAB ©, and other modern languages. The examples are sufficiently simple to be translated into older languages such as C and FORTRAN 77 if desired.

## **Parallel and Distributed Processing and Applications**

- Jiannong Cao 2005-01-17

Welcome to the proceedings of the 2nd International Symposium on Parallel and Distributed Processing and Applications (ISPA2004) which was held in Hong Kong, China, 13-15 December, 2004. With the advance of computer networks and hardware technology, parallel and distributed processing has become a key technology which plays an important part in determining future research and development activities in many academic and industrial branches. It provides a means to solve computationally intensive problems by improving processing speed. It is also the only able approach to building highly reliable and inherently distributed applications. ISPA2004 provided a forum for scientists and engineers in academia and industry to exchange and

discuss their experiences, new ideas, research results, and applications about all aspects of parallel and distributed computing. There was a very large number of paper submissions (361) from 26 countries and regions, including not only Asia and the Pacific, but also Europe and North America. All submissions were reviewed by at least three program or technical committee members or external reviewers. It was extremely difficult to select the presentations for the conference because there were so many excellent and interesting submissions. In order to allocate as many papers as possible and keep the high quality of the conference, we finally decided to accept 78 regular papers and 38 short papers for oral technical presentations. We believe that all of these papers and topics not only provide novel ideas, new results, work in progress and state-of-the-art techniques in this field, but also stimulate the future research activities in the area of parallel

and distributed computing with applications.

*Program Synthesis* - Sumit Gulwani 2017-07-11

Program synthesis is the task of automatically finding a

program in the underlying programming language that satisfies the user intent expressed in the form of some specification. Since the inception of artificial intelligence in the 1950s, this problem has been considered the holy grail of Computer Science. Despite inherent challenges in the problem such as ambiguity of user intent and a typically enormous search space of programs, the field of program synthesis has developed many different techniques that enable program synthesis in different real-life application domains. It is now used successfully in software engineering, biological discovery, computer-aided education, end-user programming, and data cleaning. In the last decade, several applications of synthesis in the field of programming by examples have been deployed in mass-market industrial products. This monograph is a general overview of the state-of-the-art approaches to program synthesis, its applications, and

subfields. It discusses the general principles common to all modern synthesis approaches such as syntactic bias, oracle-guided inductive search, and optimization techniques. We then present a literature review covering the four most common state-of-the-art techniques in program synthesis: enumerative search, constraint solving, stochastic search, and deduction-based programming by examples. It concludes with a brief list of future horizons for the field.

**Napoleon, CEO** - Alan Axelrod  
2011-12-01

The next in Alan Axelrod's engaging and popular CEO series spotlights a perfect subject: Napoleon, the brilliant military strategist who also laid the administrative and judicial foundations for much of Western Europe. Axelrod looks at this much-studied figure in a new way, exploring six areas that constitute the core of what made Napoleon a great leader: Audacity, Vision, Empathy, Strategy, Logistics, and Tactics. Within these areas Axelrod formulates

approximately 60 lessons framed in military analogies, valuable for anyone who aspires to leadership, whether in the boardroom or the Oval Office.

**Brothers Against the Raj: A Biography of Indian Nationalists Sarat and Subhas Chandra Bose -**

Leonard a. Gordon 2014-11-01  
Subhas Chandra Bose and his brother Sarat were among the most important leaders of the Indian struggle for independence. *Brothers Against the Raj* is the definitive biography of the Bose brothers, placing them in the context of the Indian freedom struggle and the turbulent international politics of the period. Leonard A. Gordon uses material

gathered from archives, records and over 150 interviews he conducted with the brothers' political contemporaries and family members, as well as hundreds of unpublished letters, to bring to life once more two of India's most controversial leaders during one of the most significant epochs in Indian history. "[A] distinguished book... Mr. Gordon is a thorough scholar..." "one of the books of the year for 1990." "Gordon has done full justice to the Bose brothers, giving them their due and recounting their story in the context of the turbulent times in which they lived." "Professor Gordon has... conducted exhaustive and painstaking research and put its fruits into an eminently readable book. Besides, he has skilfully put the story of their lives into the context of the complex politics of India and Bengal of their times." "The author is a New Yorker but knows Calcutta well... The entire distinguished family seems to come alive as he writes, but he is careful to

paint them with their warts intact." "[An] extraordinary, informative, and insightful study of Subhas and Sarat Bose." " I have found the book informative and absorbing. [ Gordon has] managed to combine empathy with objectivity- not an easy feat." *Advances in Rice Science*

Sentiment Analysis and Opinion Mining - Bing Liu 2012  
Sentiment analysis and opinion mining is the field of study that analyzes people's opinions, sentiments, evaluations, attitudes, and emotions from written language. It is one of the most active research areas in natural language processing and is also widely studied in data mining, Web mining, and text mining. In fact, this research has spread outside of computer science to the management sciences and social sciences due to its importance to business and society as a whole. The growing importance of sentiment analysis coincides with the growth of social media such as reviews, forum discussions, blogs, micro-blogs, Twitter, and social networks. For the first time in human history, we now have a huge

volume of opinionated data recorded in digital form for analysis. Sentiment analysis systems are being applied in almost every business and social domain because opinions are central to almost all human activities and are key influencers of our behaviors. Our beliefs and perceptions of reality, and the choices we make, are largely conditioned on how others see and evaluate the world. For this reason, when we need to make a decision we often seek out the opinions of others. This is true not only for individuals but also for organizations. This book is a comprehensive introductory and survey text. It covers all important topics and the latest developments in the field with over 400 references. It is suitable for students, researchers and practitioners who are interested in social media analysis in general and sentiment analysis in particular. Lecturers can readily use it in class for courses on natural language processing, social media analysis, text mining, and data

mining. Lecture slides are also available online. Table of Contents: Preface / Sentiment Analysis: A Fascinating Problem / The Problem of Sentiment Analysis / Document Sentiment Classification / Sentence Subjectivity and Sentiment Classification / Aspect-Based Sentiment Analysis / Sentiment Lexicon Generation / Opinion Summarization / Analysis of Comparative Opinions / Opinion Search and Retrieval / Opinion Spam Detection / Quality of Reviews / Concluding Remarks / Bibliography / Author Biography

Chandragupta Maurya and His Times - Radhakumud Mookerji

*Neoclassical Finance* Stephen A. Ross 2009-04-11

Neoclassical Finance provides a concise and powerful account of the underlying principles of modern finance, drawing on a generation of theoretical and empirical advances in the field. Stephen Ross developed the no arbitrage principle, tying asset pricing to the simple proposition that there are no free lunches in financial markets, and jointly with John Cox he developed the related concept of risk-neutral pricing. In this book Ross makes a strong case that these concepts are the fundamental pillars of modern finance and, in particular, of market efficiency. In an efficient market prices reflect the information possessed by the market and, as a consequence, trading schemes using commonly available information to beat the market are doomed to fail. By stark contrast, the currently popular stance offered by behavioral finance, fueled by a number of apparent anomalies in the financial markets, regards market prices as

subject to the psychological whims of investors. But without any appeal to psychology, Ross shows that neoclassical theory provides a simple and rich explanation that resolves many of the anomalies on which behavioral finance has been fixated. Based on the inaugural Princeton Lectures in Finance, sponsored by the Bendheim Center for Finance of Princeton University, this elegant book represents a major contribution to the ongoing debate on market efficiency, and serves as a useful primer on the fundamentals of finance for both scholars and practitioners.

**Quantile Regression** - Roger Koenker 2005-05-05

Quantile regression is gradually emerging as a unified statistical methodology for estimating models of conditional quantile functions. By complementing the exclusive focus of classical least squares regression on the conditional mean, quantile regression offers a systematic strategy for examining how covariates influence the

location, scale and shape of the entire response distribution. This monograph is the first comprehensive treatment of the subject, encompassing models that are linear and nonlinear, parametric and nonparametric. The author has devoted more than 25 years of research to this topic. The methods in the analysis are illustrated with a variety of applications from economics, biology, ecology and finance. The treatment will find its core audiences in econometrics, statistics, and applied mathematics in addition to the disciplines cited above.

### **Ethnobotany of the**

**Mountain Regions of**

**Southeast Asia** - F. Merlin

Franco 2021-06-21

This volume is a compendium of selected plant species of ethnobotanical value to the highland communities of popular Southeast Asia.

“Traditional” knowledge held by local communities on their resources is always in flux and adapting to a quickly changing

environment. New plants find their entry into the local pharmacopoeias, while existing ones maybe removed. Likewise, various local communities might find the same plant useful for completely different purposes. While compiling information on the species, authors have taken great care to ensure that the dynamic nature of ethnobotanical knowledge is represented adequately. Special emphasis has also been given to cultural value of species to the local communities in the region. The field (and thus the market) of ethnobotany and ethnopharmacology has grown considerably in recent years. Student interest is on the rise, attendance at professional conferences has grown steadily, and the number of professionals calling themselves ethnobotanists has increased significantly (the various societies (Society for Economic Botany, International Society of Ethnopharmacology, Society of Ethnobiology, International Society for Ethnobiology, and many

regional and national societies in the field currently have thousands of members). The objective of this new Major Reference Work on Ethnobotany of Mountain Regions of Southeast Asia is to take advantage of the increasing international interest and scholarship on highland landscapes and communities. While ethnobotanical studies are now available from many regions of the world, no comprehensive encyclopedic volume on the highlands of popular SE Asia is available in the market. We include the best and latest research on a full range of descriptive, methodological, theoretical, and applied research on the most important plants for the region. Scholars in plant sciences worldwide will also be interested in the dedicated website for this volume and its dynamic content.

**Value as a Service** - Rob Bernshteyn 2016-08-26

Making predictions about the future is always tricky. But there is one prediction that author Rob Bernshteyn is quite confident in making: Across a host of industries, we will move to a model that he calls value as a service. It is already common knowledge that many traditional-products companies are converting the delivery of their offerings to the as-a-service model. With the completion of this transition

assumed, the coming disruption will focus less on the delivery model and more on the value delivered. Value as a Service is the simple idea that measurable value delivered for customers will be the ultimate competitive battleground.

Every customer will want to understand the exact value that they are being provided. They will want a quantifiable difference as they compare their options. Is your business ready to embrace this coming disruption? Are you ready?
